What is Bromhexine?

Bromhexine is a cough medicine marketed by Healthypharm. The active ingredient bromhexine is an expectorant which works by loosening mucus in the chest, making it easier to cough up secretions. Bromhexine cough syrup should not be used for tickly (dry) coughs. Bromhexine is available in various strengths and can be used by adults and children aged two years and older.

What is it used for?

Bromhexine is used to treat productive, chesty coughs. The syrup or tablets make it easier to cough up the mucus, or phlegm, in the lungs and upper airways by making it thinner. Bromhexine takes effect after about five hours. This medicine can be used for chesty coughs caused by, for example, the flu, bronchitis, chronic obstructive pulmonary disease (COPD) or cystic fibrosis (CF).
