## Beclomethasone Inhalation

### What is beclomethasone inhalation?

Beclomethasone is a steroid. It prevents the release of substances in the body that cause inflammation.

Beclomethasone inhalation is used to prevent asthma attacks in adults and children who are at least 5 years old. This medication will not treat an asthma attack that has already begun.

Beclomethasone inhalation may also be used for purposes not listed in this medication guide.
