Micatin ointment

What is this product?

Miconazole belongs to the class of medications called antifungals. It is used to treat various skin infections caused by fungus or yeast.

Miconazole can be used to treat tinea pedis (athlete's foot), tinea cruris (jock itch), tinea corporis (ringworm), candidiasis (various yeast infections of the skin and mucous membranes), and tinea versicolor (patches of skin that are a different colour than the rest of the skin).

Miconazole works by killing the overgrowth of yeast and fungus that are causing the infection.

Miconazole usually starts to work within a few days of starting treatment.

Treatment may be needed for up to 2 to 4 weeks, depending on the infection.
