Tacrolimus topical

What is this medicine?

Tacrolimus is an immunosuppressant. It works by decreasing your body's immune system. Tacrolimus topical (for the skin) is used to treat severe atopic dermatitis (eczema).

Tacrolimus may also be used for purposes not listed in this medication guide.

What should I tell my health care providers before I take this medicine?

You should not use tacrolimus topical if you are allergic to it.

To make sure you can safely use tacrolimus topical, tell your doctor if you have any of these other conditions:

- skin cancer or a skin infection (including herpes or chickenpox);
- any genetic skin disorder (such as Netherton's syndrome);
- a weak immune system (caused by disease or by using certain medicines);
