Kisqali

Generic Kisqali (ribociclib) is a cancer medicine that interferes with the growth and spread of cancer cells in the body. It is used to treat hormone-related breast cancer in women. Ribociclib is used only if your cancer tests negative for a protein called human epidermal growth factor receptor 2 (HER2). HER2 protein can speed the growth of cancer cells. This medicine is used when cancer has progressed or has spread to other parts of the body after other treatments. Kisqali is usually given in combination with another cancer medicine such as letrozole (Femara) or fulvestrant (Faslodex).

Active ingredient: [Ribociclib](#)

Brand(s):Kryxana

Manufacturer: Novartis

Ribociclib tablet

What is ribociclib?

Ribociclib is used to treat hormone-related breast cancer in women.

Ribociclib is used only if your cancer tests negative for a protein called human epidermal growth factor receptor 2 (HER2). HER2 protein can speed the growth of cancer cells.

Ribociclib is used when the cancer has progressed or has spread to other parts of the body after other treatments.

Ribociclib is given in combination with another cancer medicine such as letrozole (Femara) or fulvestrant (Faslodex).

Important Information

Ribociclib can cause serious side effects on your heart, liver, or lungs. Call your doctor at once if you have chest pain, fast or pounding heartbeats, trouble breathing, cough (with or without mucus), sudden dizziness, right-sided upper stomach pain, loss of appetite, unusual bleeding or bruising, dark urine, or yellowing of your skin or eyes.
